Leak Analysis & Solutions, Inc.

## Field Leak Survey

In most utilities, leaks may run undetected for long periods of time. The Advanced Leak Analysis and Solutions, Inc. Field Leak Survey is a state-of-the-art leak detection process designed to cut your annual losses by dramatically reducing your leak loss time.

Conveniently-scheduled Field Leak Surveys can be an essential part of your scheduled maintenance procedures. They help conserve precious resources and reduce your overall system problems. Automatic survey services are also available. They include an array of advanced leak detection sensors performing a regular survey of your system. Leak noise data can be collected daily, monthly or on-demand.

Using the latest high-tech, non-invasive and non-destructive methodologies, we will perform complete, partial or emergency leak detection services on any portion of your system. By pinpointing your surface and sub-surface leaks, you may save more than water. We will save you valuable time; cut expensive overtime labor and machinery expenditures; and limit your loss of revenue and the cost of unnecessary excavations while reducing your legal liabilities from property damage and health issues; minimizing expensive and dangerous road damage; and lowering the high cost of emergency repairs.
