## Meter Management

Meters are designed to measure the volume of water delivered to a customer. Under-registration of meters means lost revenue and may allow your operating costs to go out-of-balance.

Advanced Leak Analysis and Solutions, Inc.'s Meter Management Programs benefit everyone by allowing the system to maintain the lowest possible water rates. That's why your water distribution system should practice effective, regular meter management protocols.

Advanced Leak Analysis and Solutions, Inc. provides three levels of Meter Management Programs:

- A complete Meter Testing Program
- A Meter Testing and Repair Program
- A comprehensive Meter Replacement Program

### Meter Testing Program

A system with high, non-revenue water usage is virtually certain to have problems. A Meter Testing program by Advanced Leak Analysis and Solutions, Inc. will determine the scale and scope of your water meter issues. Older meters and those carrying the largest volumes should be given first priority, but small meters should also be tested regularly according to AWWA standards.

### Meter Repair or Replacement Program

Any mechanical device wears down and breaks over time. Meter deterioration is accelerated by corrosive or abrasive water and by the rate of flow. Wear and tear on internal components will lower measurements. After a certain age, inaccurate water meters become an economical liability.

Advanced Leak Analysis and Solutions, Inc. can prove that meters should be repaired or replaced when their accuracy has diminished. The cost of repair or replacement is less than the loss of revenues with continued use of inaccurate meters. Essentially, our Meter Repair or Meter Replacement Programs pay for themselves.

Repairing meters can be an especially economical option for many water operations. However, a meter replacement program is often the best and most cost-effective method. It's the obvious answer when meters are beyond their practical service period.

Advanced Leak Analysis and Solutions, Inc.'s Meter Repair and Meter Replacement Programs strike a viable economic balance between cost and loss of revenue due to faulty or old meters.
